## Company Profile

REICON Wärmetechnik und Wasserchemie Leipzig GmbH (Heating Technology and Water Chemical Processing) is a medium-sized enterprise based in Leipzig, Germany.

The company originated from a department of the Institute of Energetics in Leipzig, which carried out extensive research work in the field of heating technology and water chemical processing in cooperation with the former academy institutes.

Since the foundation of our company in 1992 we have been specialising in the service provision for products concerning the chemical running-process of water- and steam conducting systems.

In our work we include the application of our in-house developed and successfully long-term tested technologies. These are e.g.:

- Cleaning of boiler facilities, steam pipes and heat exchangers
- Conservation of boiler facilities, entire circuits and single components
- Conditioning of water- and steam-circulations
- Conservation and conditioning of cooling-circuits

We are a certified specialist company according to §19 I of the Federal Water Act and with our monitored quality management according to DIN ISO 9001:2000 we offer a professional and high-quality service for:

- Power stations
- Combined heat and power stations and industrial power stations
- Long distance heating transmission networks
- Cooling circuits
- Special industrial applications (e.g. corrosion protection of autoclaves in the construction materials industry)

Our team, many of which took part in the development of ODAICON® and all related technologies, represent over 30 years of professional experience in the field of power station chemical engineering.

Since the year of start-up the REICON Leipzig GmbH presents steadily increasing turnover figures. The basis for this success is the constant further development of our product- and service spectrum. This involves the development of specified products for the conservation of engines and cooling circuits as well as the design of cleaning technologies and custom-made applications for a large variety of different industrial firms.

With our comprehensive product- and service spectrum we are successfully present in Germany as well as in other European countries like Austria, Switzerland, France and Italy for example. But the REICON Leipzig GmbH products are also employed on the international market, e.g. in Russia, Estonia, Latvia, China and the Middle East countries.

In case of any queries regarding our products or services, please do not hesitate to contact us.

Ronny Wagner  
Managing Director
